[New SMT Dual Entry Receptacle Challenge Your Mind and Win!](#)[Connect With Us](#)[Industry News](#)[Industry Events](#)

Surface Mount Dual Entry Receptacle Offers Flexibility

Consistent with our principle of providing high quality and practical products, we bring you the 1266 SMT Dual Entry Receptacle. The versatile design accepts both top and bottom entry and is capable of mating with posts/tabs ranging from .020" to .032" thick and .020" to .125" wide. Additionally, the receptacle is noted for a small footprint and high 10 amp current rating.

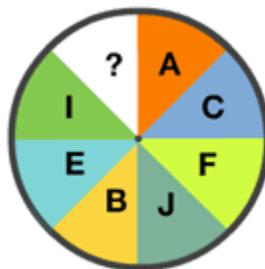

Manufactured for durability and reliability, the 1266 SMT Dual Entry Receptacle accommodates a minimum of twelve mating cycles without degradation. A higher mating cycle version is available. High locational tolerance results in geographic stability and a high pressure contact area accounts for a reliable gas tight connection.

The 1266 SMT Dual Entry Receptacle is designed for automation with existing pick and place equipment and a special feeder. As a result, no costly fixturing is required, and time-consuming hand placement is eliminated.
